

## ABSTRACT

A foldable tabletop easel with a pair of opposing support members rotatably connected in a vertical central joint, opposing pedestal members rotatably attached to the lower vertical portion of the outside edges of the respective support members and a positioning tab connected to one of the support members in a tab insert adjacent to the central joint. The positioning tab has slots which secure the easel in a display position as the positioning tab is rotated onto a tab rib in a tab insert in the other support member. The easel can be of unitary construction of cardboard.
